| | | | | |
| 12 | Funkció Ltd. | Agricultural and food industry | <p>The DARNÓ-HÚS factory was established in 1995 as a part of the family company named Funkció Ltd. (1991) producing traditional products with local tastes which are denominated after the name of the village (Trademark). Traditional recipes were collected from the villages and supported by butchers of the region. Finally the experiences and traditions were combined with the opportunities given by modern technologies. Sausages: made from high quality raw material with beautiful taste harmony due to the traditional Hungarian basic spices like paprika, pepper, garlic and cumin), preserved with smoke generated from beech and maturated for many days. Wursts: made from pork offal and jowl bacon spiced with traditional Hungarian basic spices and finally gently cooked together with bread and rice. That is recommended to offer it both cold and baked way. Oven sausages, frankfurters: nothing special just simply great! Made from small cut pork meet, salt, pepper, garlic and cumin powder, sweet and hot paprika. The secret is the ration of ingredient! Frankfurter: it is very popular, made from pork and beef with harmonic spices. The presence of beef gives a very nice crunchy characteristic to the product. 9 Darnó-Hús products won Hungarian Product Award.</p> | Trading meat and meat products. |

| 95 | Nanobase Ltd. | Innovation Management | <p>It is a well-known fact that the bacteria can stay alive for weeks even on a sterile surface. So the sterile environment itself is not enough to kill the multidrug-resistant pathogens. It's not a simple cleaning, but a throughout disinfection regime that includes both visible and also microbiological cleanliness as well. In contrast a surface treated by Nanobase hygiene coating eliminates the problem of multidrug-resistant bacteria particularly effectively and reliably. This is how the Nanobase coating rids the surface from bacteria. The functioning of the coating is based on the method of photocatalysis, it generates antimicrobial surface. Under the effect of natural or artificial light, the viruses, bacteria and other pathogens decompose when they come into contact with surfaces treated by nanotechnology agent. Hygiene coating NB2206 is perfect for the prevention of the colonization of every kind of pathogen, it has also an antibacterial effect. Its antimicrobial effect is activated also on the surface of medical tools, clothes and equipment. Our hygiene coating can be used on such areas where there is almost no light or there is no light at all. So the coating is not only capable of active protection against bacteria and viruses, but also for the industrial production of antimicrobial masks, clothes and filters.</p> | <p>nanotechnológiás felületvédelem</p> |

| <p>127 KyoNewaza Federation</p> | <p>Sport</p> | <p>techniques Kyonewaza is a kind of martial arts and combat sports arising in Hungary and its introduction was preceded by 15 years of development work. Kyonewaza is a sort of martial arts definitely based on submission techniques. Its specialty is coming from the fact that the own techniques are alloyed with the most effective elements of different types of submission techniques. It is such a complex system that has been developed gives a good opportunity by using the most effective modalities for ending the fight. It shows direction to submission techniques through dominant positions. The base of conception is how to defeat a “standing” fighter who is more trained, or perhaps taller and stronger. The key in our submission techniques is to get into the dominant position. The outcome of the fight on the ground will be then sealed by combining the necessary technical skills with muscle strength. A broader technical repertoire is available for the one who is in the dominant position so he can initiate an attack very easily from this position. The technical range is very wide and combinative. We not only can develop our technical skills but we can also develop logic and strategic skills. After the acquisition of the dominant position we can carry on fighting in several ways, we will have the opportunity to do chokes, tension of the joints, body presses and we can also disrupt the circulatory system. By this way we can achieve that our opponent will be unable to keep on fighting. (In a competition he can indicate it by knocking, which means the end of fight.) Meanwhile submission elements that otherwise used to be an integral part of Kyokushin Karate have faded out. One of the main aims of the foundation of Kyonewaza is to make this knowledge available and to infiltrate into the system of Kyokushin Karate, making that more effective. Since it is a total submission system, there is a possibility for teaching it as an unattached kind of martial arts. Masters qualified in Kyonewaza not only can make their own trainings based on their basic style</p> | <p>Sport, Martial arts</p> |

| 128 | V4ROLL SPORTS MANUFACTURING LTD. | Sport | V4Roll Ltd. is a Hungarian private enterprise developing, manufacturing and trading innovative new sports articles under the brand name ViiRoll®. Our main product lines are roller skates, skateboards and numerous other innovations. The patented ViiRoll® ROLLER SKATES feature a unique V-shaped wheel suspension that provides much better stability and skating comfort than normal in-line skates - yet they run faster with less effort and are very easy to guide. They come with specialized sets of user-changeable wheels for different surfaces (asphalt, rough ground and ice). The ViiRoll® SKATEBOARDS have flexible rubber wheel supports to absorb the vibration and impacts during use, easing the stress off the rider's joints. The top quality specialized raw materials provide extra durability and impact-resistance for the product. Further information: www.viroll.eu. Contact: karolycsepi@gmail.com. Tel.: + 36 30 206 1272 | We seek trading partners/distributors in Slovenia and on the Balkans for the sales of our innovative rollerskates and skateboards. We also seek investors/partners for a mineral water bottling plant development project in Hungary, based on a rich spring of EU-certified top quality mineral water. |
