

Webinar series – Making the business case for green construction

Which future for public works?

8 March 2022 from 14h00 until 15h30 CET

PROGRAMME

The European Union is currently setting the foundations for reaching its objective of carbon neutrality in 2050.

Due to the amounts of materials used, the amounts of waste and emissions generated during the construction phase, greening the construction of infrastructure is essential to reach the EU's climate and environmental objectives.

With this webinar we want to illustrate the business case for green public works and send a strong signal to stakeholders in the construction industry about why and how to embrace the green transition.

Opening remarks

- **Domenico Campogrande**, Director General of FIEC

Moderation

- **Kaitlyn Dietz**, ICLEI –Sustainable Construction & Circular Economy Officer

How is the European Commission promoting the greening of infrastructure projects?

- **Anna Lupi**, European Commission, DG GROW, Legal and Policy Officer

What requirements can be expected in future procurements?

- **Claus Wilhelmsen**, City of Copenhagen, Technical and Environmental Administration, Climate Unit, Environmental Planner
- **Maud Vastbinder**, SKAO – Foundation for Climate Friendly Procurement & Business, Project Manager CO₂ Performance Ladder

What can construction companies do to become greener?

- **Piero Petrucco**, CEO of I.CO.P. SPA, FIEC Vice-President responsible for "Sustainability"
- **Anne-Laure Levent**, Colas Group, Environmental Department, Head of low-carbon strategy
