

# **DUOL company presentation**

# What is Air Dome:

- ① VENTILATION - HEATING
- ② RETURN / RECIRCULATION AIR
- ③ EMERGENCY / BACKUP UNIT SUPPLY AIR

**Air dome operation principle:** A clear-span air-supported structure made of high-performance membrane, stabilized by internal air pressure without internal pillars. Anchored to withstand strong winds and extreme weather, with ventilation maintaining slight overpressure (200–300 Pascal) and fresh air circulation. Energy-efficient systems with integrated heating ensure comfort, durability, and compliance with local construction codes for temporary or permanent use.

Manufacturing airdomes

## Yamal, Russia

A reference in one of the coldest areas of the world, where an air dome withstands external temperatures of up to  $-55^{\circ}\text{C}$ , while maintaining a comfortable  $+20^{\circ}\text{C}$  inside.

نيوم NEOM

## Saudi Arabia

Designed for extreme heat, this air dome maintains a stable indoor climate at +25°C, even when outdoor temperatures reach +55°C.

REFINED DESIGN

# Visual innovation

DUOL membrane systems create aesthetically outstanding air domes that combine premium design, modern architectural aesthetics, and uncompromising functionality.

## DUOL entry into Africa

- Africa is a continent, not a country.  
Which country would you enter first?
- Where and how would you obtain information about the business culture of the selected country?
- What would be the first concrete step when entering the market?
- Where do you see the greatest opportunity for the use of air-supported structures?
- Which risks can be identified in advance?
