

## **CAPS** - Project

Conversion of papermill sludge into absorbent

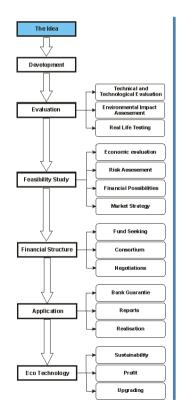

#### **Company overview**

- > Technological, Logistic and Environmental Center Ltd.
- SME company established in January 2008.
- Private R&D company oriented towards the development of the green and sustainable technologies.
- > Acredited laboratory for fuels and biofuels quality assurance.
- > 5 highly educated and motivated employees with different backgrounds.
- Company networks includes experts and institutions.

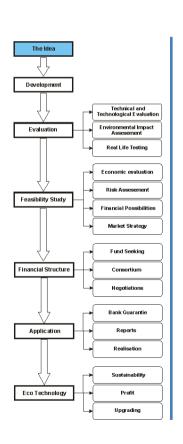

#### The Idea

- ➤ The R&D company Insol Ltd. has researched different alternative materials for landfills capping. Among them wasted papermill sludge (PMS).
- PMS has revealed a lot of usefull characteristics depending on its treatment.
- > It is a light weight material with high sorbency for hydrophobic substances and heavy metals.
- > Incineriation under controlled conditions forming vitrified granules with high sorbency for hydrophilic substances.

#### The Idea

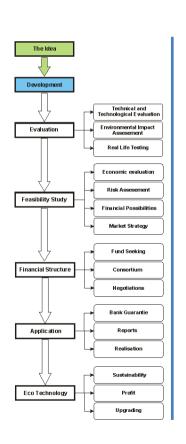

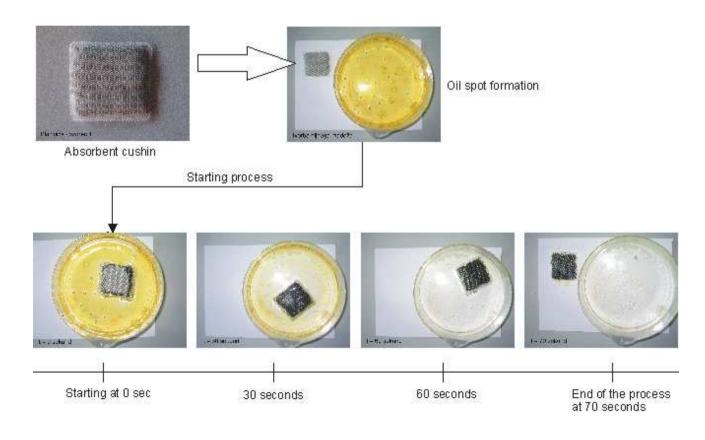

#### **Development**

> Laboratory testing in order to establish PMS capabilities.

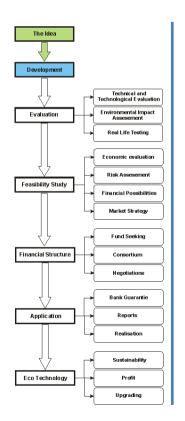

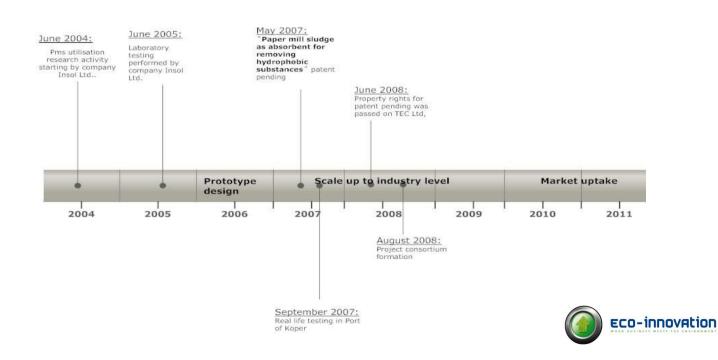

#### Development

- Company Insol Ltd. has acquired property rights.
- Insol Ltd. has passed the know-how to the company TEC Ltd. for scaling up the technology.
- > TEC Ltd. has prepared foundations for technological process.

#### **Evaluation - Technological**

> Description and evaluation of the cruicial parameters of the

technological process.

Development

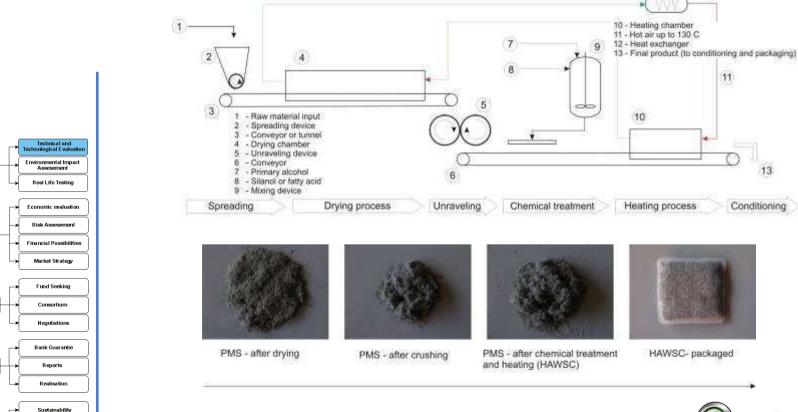

Evaluation

Feasibility Study

Financial Structure

Applic ation

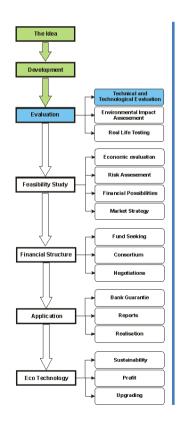

Eco Technology

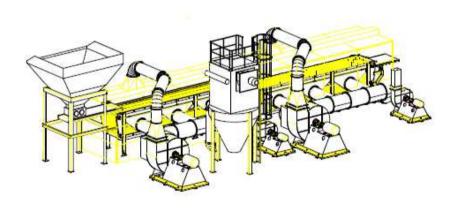

#### **Evaluation - Technological**

- > Design of the process line.
- Preparation of the technical documentation.
- > Testing and evaluation of the particular part of the processing equipment

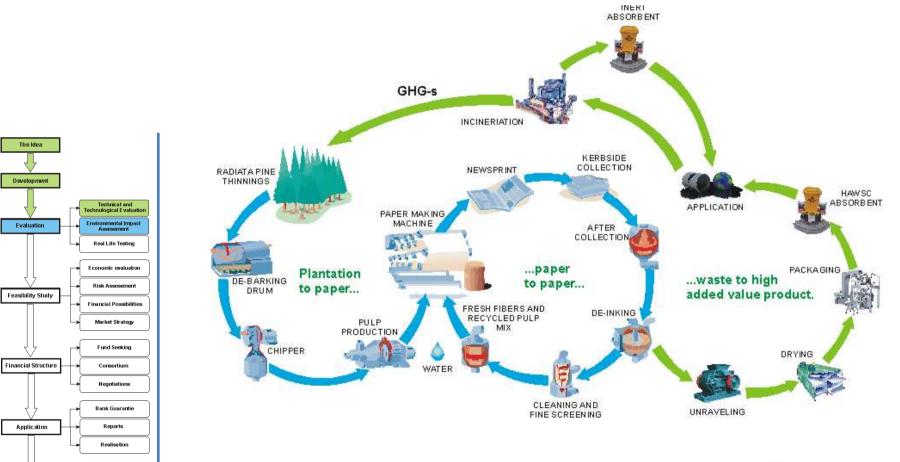

#### **Evaluation – Environmental Impact**

> Definition of the LCA inventory.

Sustainability

Eco Technology

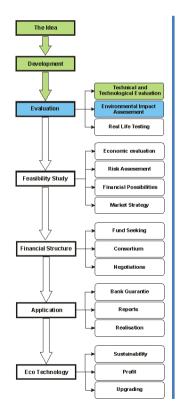

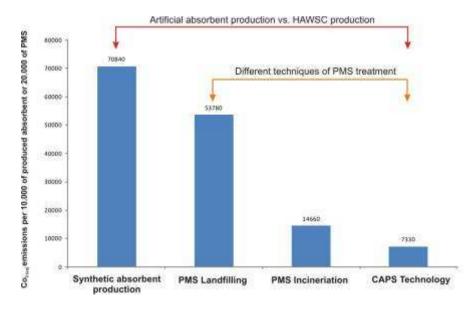

## **Evaluation – Environmental Impact**

#### > Calculation of the inveronmental impact.

| Parameter per 1 kg of product | CAPS     | Landfilling | Incineriation | Replacement by exp. PP |  |  |
|-------------------------------|----------|-------------|---------------|------------------------|--|--|
| Raw material sources          | ı        | -           |               | 1,82 kg of crude oil   |  |  |
| <b>Energy for production</b>  | 1,46 MJ  | -           |               | 101,1 MJ               |  |  |
| Calorific value               | 33,5 MJ  | -           | 6,2 MJ        | 37,0 MJ                |  |  |
| CO <sub>2</sub> emissions     | 0,73 kg  | 2,69 kg     | 0,73 kg       | 3,11 kg                |  |  |
| CH <sub>4</sub> emissions     | 1        | 0,24 kg     |               | -                      |  |  |
| Waste generated               | 1        | 1,00 kg     | 0,37 kg       | 0,003 kg               |  |  |
| Energy exploitation           | 33,5 MJ* | -           | 6,2 MJ        | 143,0 MJ*              |  |  |

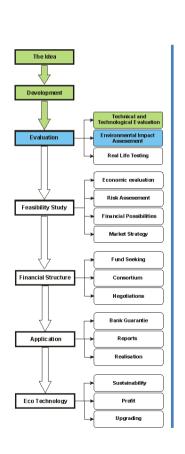

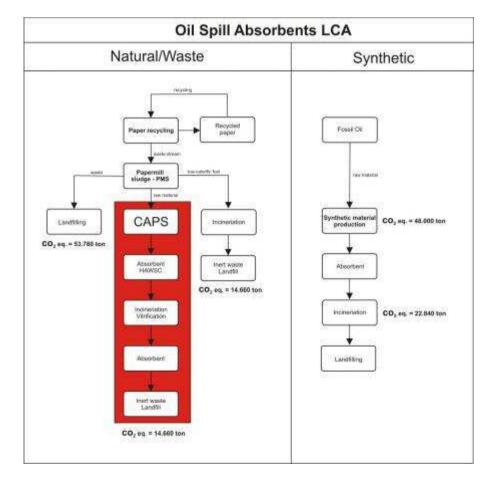

## **Evaluation – Environmental Impact**

#### > Performing LCA Analysis.

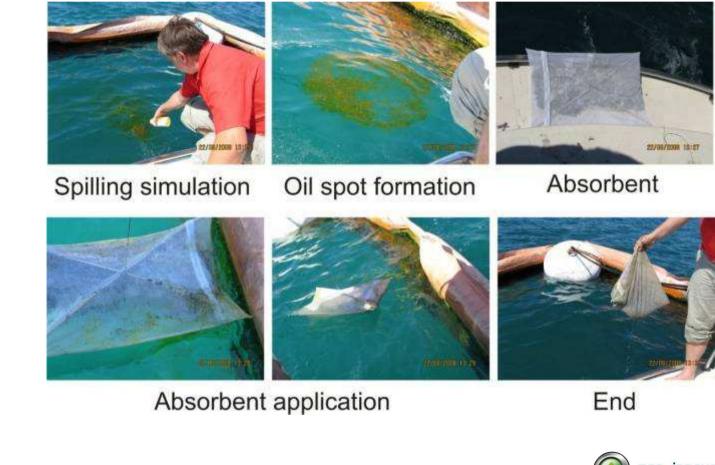

## **Evaluation – Real Life Testing**

Financial Structure

Eco Technology

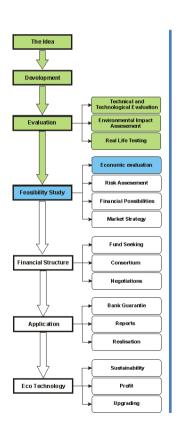

> Real life testing of the HAWSC in the Port of Koper.

### Feasibility Study - Economic Efficiency

> Calculation of the economic efficiency for three different scenarios.

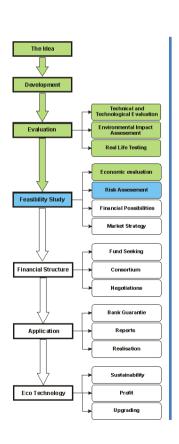

|                              | Paper-mill<br>model | EEP model     | Standalone<br>model |
|------------------------------|---------------------|---------------|---------------------|
| <b>Investment Costs</b>      | 3 844 060.00        | 4 344 000.00  | 4 344 000.00        |
| <b>Total Revenue</b>         | 6 865 040.00        | 7 220 764.00  | 7 220 764.00        |
| <b>Total Costs</b>           | 2 264 730.26        | 3 023 734.50  | 4 900 568.88        |
| Discount Rate in %           | 6.00                | 6.00          | 6.00                |

#### **Financial Possibilities**

> Preparation of a realistic financial framework.

> SME-s are usually weak with financial and human resources.

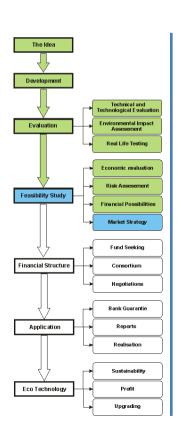

> State or European co-funding is essential to implement new ideas and technologies.

## **Market Strategy**

> Recognize advantages and weakneses of your product.

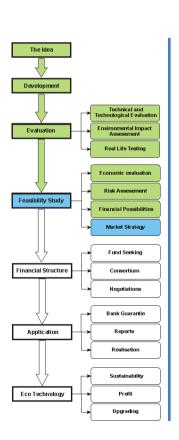

|                                  | Absorbs Oil | Hydrophobic | Floating on the water | Incinerable | Non-Leaching | Absorbs instantly | Waste Minimizations | Sustainability | Made from recycled material | Contains Silica | Anti-Static | Cost per Unit Absorbed | Reusing of usedmaterial | Disposal cost per unit<br>absorbed |

| Cellulose Absorbents    | No            | 4,10         | 0,45        | 0,11     |  |  |
| Peat Moss Absorbents    | Yes           | 7,40         | 1,33        | 0,18     |  |  |
| Expanded Polypropylene  | Yes           | 24,40        | 5,12        | 0,21     |  |  |
| Clay Absorbents         | No            | 1,00         | 0,28        | 0,28     |  |  |
| Fuller Earth Absorbents | No            | 1,40         | 0,28        | 0,20     |  |  |
| Diatomaceous Earth      | Yes           | 1,28         | 0,23        | 0,18     |  |  |
| HAWSC                   | Yes           | 7,36         | 0,62        | 0,08     |  |  |

#### **Market Strategy**

- ➤ European Union (EU-25) produces more than 14.400.000 Mt of PMS per year.
- ➤ HAWSC can uptake up to 20 % of the European market of absorbents.

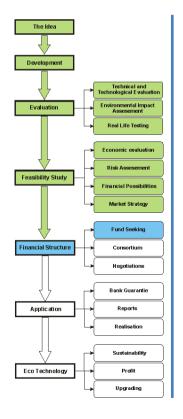

#### **Fund Seeking**

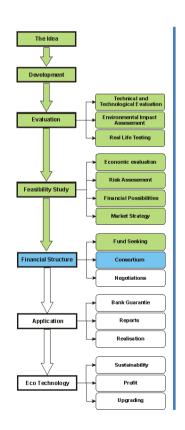

- Finding apropriate national or European co-funding possibilites.
- ➤ Eco Innovation Programe co-funds ecological projects up to 50 % of eliglible costs.
- ➤ If your project is already at an advanced stage and you dispose with relevant data then the preparation of the project proposal is simple.
- You can pre- check the adequacy of your project in advance trough web application <a href="http://ec.europa.eu/environment/eco-innovation/contact\_en.htm">http://ec.europa.eu/environment/eco-innovation/contact\_en.htm</a>.
- ➤ It is useful to contact a consultant with some experience with the application procedure (adaptation of your project to targeting points, budget preparation, internal evaluation of application, electronic delivery of application "on-time" ...).
- ➤ A realistic budget is the most important part of the project proposal (prepare budget botom-up!)

#### Consortium

- > SME-s are usually weak regarding financial and human resources.
- > 50 % of co-funding is not enough for the finalization of the project
- Find a partner which is complementary to you and give EU dimension to your project.
- Friendly company with appropriate financial backgroud.
  - A possibility is to establish a 'joint venture' after the finalisation of the Project

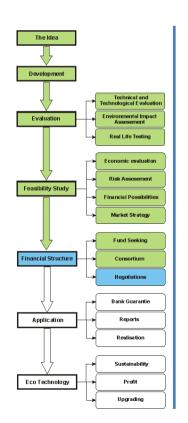

#### **Negotiations**

Very important part of the process.

> EACI Project Officer will lead you trough the negotiations.

> It usually takes one to two months.

> 'Defend' your project proposal with additional facts, measurements, analysis.

#### **Bank Guarantiee**

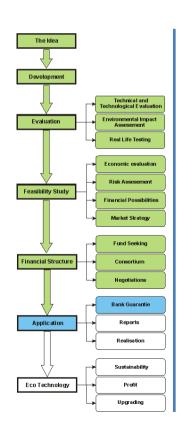

➤ The obtainment of a Bank guarantiee is crucial to get prefinancing.

> SME-s are usually weak with financial resources.

> Due to a financial crisis the bank guarantiee can be a problem

> Good bussines plan can be helpfull.

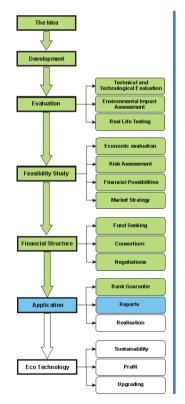

> Consortium partners can help.

#### Reports

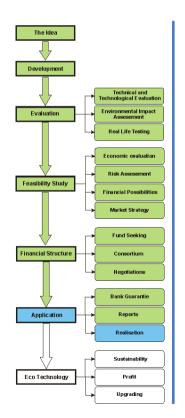

- > Follow the deadlines agreed in the Project Proposal.
- > Submit reports on time.
- > Contact your Project Officer to help you prepare a right report according to time scedule.
- ➤ Web page is compulsory and it can help you to coordinate
  - the consortium (http://caps.toc.si).

#### Realisation

- > TEC Ltd. is co- operating in the realization of the CAPS Project with the Vipap Videm Krško papermill Inc.
- ➤ Vipap Videm Krško Inc. brings to the project technical support, working place, material and energy.
- ➤ Vipap Videm Krško Inc. will improve their environmental impact and it will introduce new high added value product in their product portfolio.
- CAPS production line will be set up from 1st of September 2010 (12 months after the start of the Project)
- 2nd production line will be set up in Finland by the year 2012.

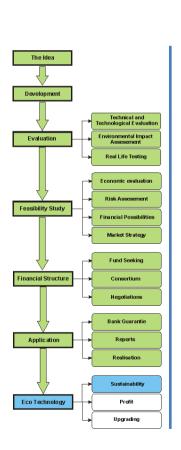

#### Sustainability

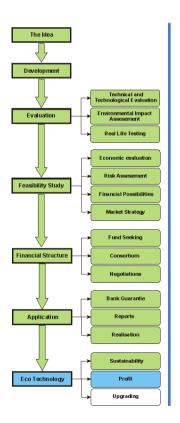

- ➤ CAPS project exploits industrial waste and wasted energy from paper industry with the aim of producing a high added value product to be used in chemichal (refineries,etc.), logistic and touristic industry as well as by fire brigades and disaster relief organisations.
- > It complies with the eco industrial symbiosis theory.
- $\triangleright$  Improves environmental impact (decrease the waste quantity for 20000 tons/year, decrease GHG-s up to 1,96 ton of CO<sub>2</sub> (eq.) per 1 tone of processed PMS).
- ➤ The application of the CAPS technology will raise awareness on how wasted material and energy can be used as valuable raw material or energy in other industrial sector with economic and environmental gains.
- ➤ The application of the CAPS technology will allow for substantial job openings and also important, the preservation of existing jobs in various related sectors.

ECO-innovation

#### **Profit**

> Ecological oriented technologies can be highly profitable.

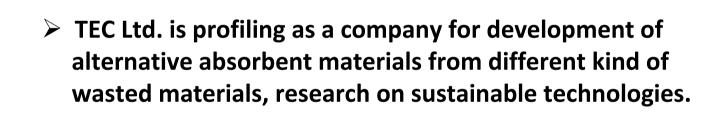

With an investment of about 3,8 Mio € in a CAPS production line with a production capacity of about 10.000 tons of absorbent per year, the paper mills can decrease their GHG-s emissions of around 0,58 tone per 1 tone of the produced paper and earn approx. 90 € for each tone of spared CO2 based on the presumption that HAWSC will be sold 30 % cheaper than the existing natural and artificial absorbents present on the market nowadays.

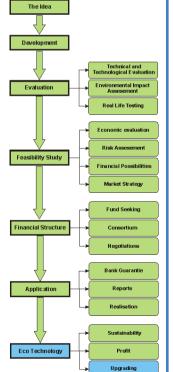

### **Upgrading**

➤ Selection for co- financing by EACI and recognition of your work by the broader public (at EU level) will give to the SME-s additional motivation for the improvement of their ideas and help to born new ones.

> Consultancy on financial possibilities (inc. EU funds)

# There is no waste out there, there are just things about which we don't like to think anymore.
