Metal Processing Industry of Slovenia

Ljubljana, 2011

In this catalogue, the Metal-processing Industry Association within the Chamber of Commerce and Industry of Slovenia presents industrial companies from the branch of fabricated metal products, from the machinery branch and from the transport equipment branch. These branches are presented together with their production activities, production programmes, addresses and communication data. Our mission is to offer information about the production programmes Slovenian producers are offering to foreign and domestic customers and investors. With this catalogue we intend to enhance knowledge about the technical and purchasing possibilities of the metal-processing industry of Slovenia within the process of the globalisation of world trade activities.

The alphabetical list of companies provides data about activities and specialised programme domains concerning the NACE index. Within the catalogue there are also citations of leading products according to statements made by the companies and common terminology. The entire catalogue is issued in both Slovenian and English. The catalogue contains information about all big and medium companies, but of the many smaller companies we listed only those that are active members.

In practical terms, the catalogue is divided into three parts:

- **Producers** are listed alphabetically. The description of each contains the company name, address, phone and fax numbers, e-mail, web homepage, leadership, number of employees, contact person, main activities,...
- **Producers grouped by activities** (NACE nomenclature classification 2008)
- **Products** represent the following index: by each code and its description we find companies that produce a certain product, together with its order number where additional details about the company can be found.

We wish all users of this catalogue great success in their future collaboration with the Slovenian metal-processing industry.

THE METAL-PROCESSING INDUSTRY IN SLOVENIA

As already mentioned, the metal processing industry as a sector encompasses three main activity fields: metalworking, machine-building and transport means manufacturing. As such it represents one of the strongest sectors within national manufacturing industries. With its 26% of employees it generates 32% of export and 29% of income of all manufacturing companies in Slovenia. Metal processing sector employs more than 52.000 employees

The Slovenian metal-processing industry realised 6,5 bn € of total income in 2009. Foreign trade represents more than 64% of total income. The metal-processing industry in Slovenia employs over 52.000 people in more than 2.400 companies.

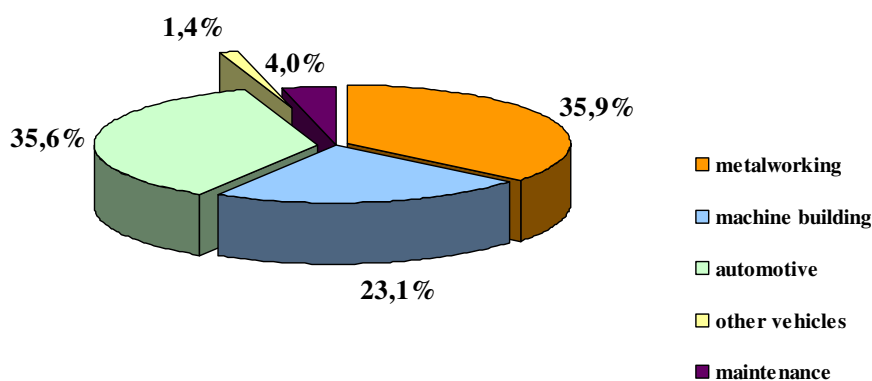

In next chart the shares of the metal-processing industry relative to the whole manufacturing industry of Slovenia are shown.

Metal processing industry within manufacturing industries

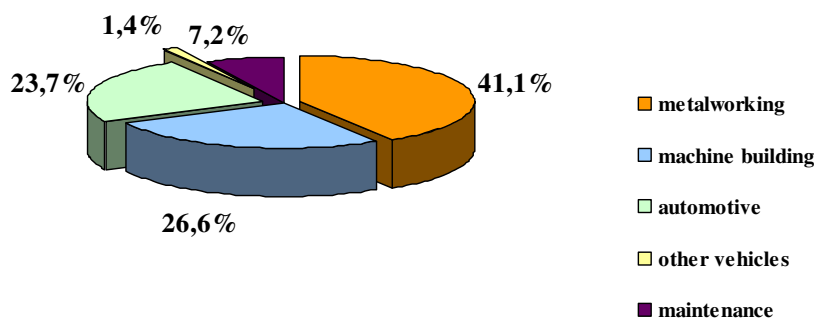

Following chart illustrates shares of income of subsectors for all metal processing industry branches.

REVENUE

One of the indicators of business performance is value added. The metal-processing industry made 1,53 bn € in value added in 2009 which represented an 28% share of the entire national manufacturing industries. Value added levels per employee differed from branch to branch, but were highest in the transport equipment industry.

VALUE ADDED

Export

Most of export value is result of foreign sales from motor vehicle producers and automotive industry's suppliers. Forging, steel constructions, mechanical parts and components and machine building are also among strongest exporters. Majority of products exported is sold into European Union (Germany, France, Italy, Austria,...); Balkan region is a traditional export market and far-East, fast growing markets are also becoming more and more common destination.

Workforce

Metal processing industries boasts a long industrial tradition. This, coupled with good command of foreign languages (91% of population is able to communicate in in at least one foreign language and 71% of population in at least two of them) forms a competitive edge. Technologically-minded, highly educated (in metal processing industries: 16% university degree, 62% secondary school) employees represent a workforce that is not cheap, but cost-effective.

THE METAL-PROCESSING INDUSTRY ASSOCIATION

The Metal-processing Industry Association is a branch association organised within the Chamber of Commerce and Industry of Slovenia (CCIS). The Association formulates standpoints and policy towards legislative bodies, governmental institutions along with other international and national associations and social partners. To increase the competitiveness and financial efficiency of its members, the Metal Processing Industry Association organises joint promotional activities, promotes consulting and development projects, participates in the development of the professional training system and implements statutory authorisations in connection with the protection of domestic industrial production. The Association co-operates in the drawing up of strategies and policies on national and international level. It also represents the interests of its members and provides them with a range of information and consultations.

The following committees work within the Association:

- Committee for Tool-making
- Committee for Fluid Power
- Committee for Security Cupboards, Cash Registers and Safes
- Committee for Steel Construction
- Committee for Valve Producers
- Committee for Education

The Association and the committees within it are members of the following international associations:

- ORGALIME – trade federations or associations representing the metal-working, mechanical, electrical and electronic engineering industries in European countries
- ISTMA – International Special Tooling & Machining Association
- CETOP –European Oil, Hydraulic & Pneumatic Committee
- EUROSAFE – European Committee of Safe Manufacturers Association
- ECCS – European Structural Steel Committee
- CEIR – European Committee for the Valve Industry
